

ADJUSTABLE VEHICLE

Abstract of the Disclosure

A vehicle is described that allows an operator to adjust it specifically
5 to fit the operator's desires. A seat can be adjusted for comfort and safety
by adjusting distance from pedals, and a tilt relative to the frame. A
particular seat cushion can also be adjusted to the particular desires of the
rider. The relative movement of vehicle frame components when the
vehicle is traveling over uneven terrain can be adjusted by adjusting a
10 suspension dampener. The steering mechanism can be adjusted for a
proper fit and comfort.
